EXECUTIVE SUMMARY

This Housing Element Update addresses the planning period from 2014-2021 in accordance with applicable state law, and consistent with the City of Rolling Hills General Plan and the community’s vision of its housing needs and objectives. As a hillside community, Rolling Hills’ ability to provide housing is limited by its serious geologic, topographic and environmental constraints. Within the framework of these constraints, the City endeavors to promote housing opportunities for all households.

This Housing Element Update reflects the City’s continuing efforts to retain and expand housing opportunities in the community. For the duration of this planning period, the City of Rolling Hills commits to a series of actions to support affordable housing. These actions continue from the last planning period and strive toward the following accomplishments:

1. Provide housing service information to community senior citizens
2. Enforce code violations within residential neighborhoods
3. Facilitate new construction by working closely with housing developers and builders
4. Monitor the City land supply
5. Promote reasonable accommodations for the disabled
6. Support energy conservation and sustainable development measures
7. Support fair housing counseling and monitoring.

I. INTRODUCTION

A. COMMUNITY OVERVIEW

The City of Rolling Hills is a rural, equestrian residential community, consisting entirely of large lot residential parcels of one acre or more. Physically, the community encompasses 2.98 square miles of land on the Palos Verdes Peninsula in the County of Los Angeles. (Refer to Figure 1, Vicinity Map.) The land use pattern was established with the original subdivision and sale of parcels that began in 1936. The community is comprised of single-story California ranch style homes with three-rail fences and equestrian facilities in a wooded setting, developed around the hilly terrain and deep canyons of the City.
From its inception in 1936, the emphasis in Rolling Hills has been to create and maintain a residential community that would respect its unique land form constraints. The City’s minimum lot size requirements were established in recognition of these constraints, which include:

1. Steeply sloping hillsides
2. Landslide hazards
3. Lack of urban infrastructure, specifically sewer
4. Danger of wildland fires
5. Sensitive animal habitats and species
6. Restrictions of enforceable covenants, conditions, and restrictions of the Rolling Hills Community Association (RHCA), which existed prior to the City’s incorporation.

**Geologic Constraints:**

Expansive soils and geologic hazard conditions continue to place constraints on development within the City. Portions of the City are located over ancient landslide, which from time to time reactivate and affect the land. It is impossible to predict when and if a property will be affected. One of the reasons the City insists on minimal grading is to minimize land disturbance and exacerbation of soils instability. Because of these geologic conditions, the City has experienced recent major landslides, further limiting the developable area within its boundaries.

In the past 7 years, three private properties experienced earth movement where a portion of their slope slid, requiring the property owners to do extensive and expensive slope restoration work. Last year, geological exploration on an 8 acre vacant property, where a home was being proposed, revealed unstable conditions and an ancient landslide. Pursuant to the Los Angeles County Building Code, before the property...
owner could be allowed to proceed with construction, extensive remediation of over 4 of the 8 acre lot was required.

**Fire Safety Constraints:**

According to the California Department of Forestry and Fire Protection, effective July 1, 2008, all land in the City of Rolling Hills was upgraded one level to “Very High Fire Hazard Severity Zone” (VHFHSZ) (Very High Fire Hazard Severity Zone). As a result, several more restrictive fire safety standards were adopted in the City Building Code that apply to all new development in the City. Examples of the new fire safety building standards include requirements to box in eave projections (common to all ranch style homes in Rolling Hills), to install double paned windows, heavy timber construction materials and other construction materials approved by the California Fire Marshall only. Professionally designed landscaping meeting the Fire Department fuel modification zones requirements including fire-resistive plants around structures are also required. The new fire zone designation and related standards are placing additional constraints on new development, especially resulting in higher design and building costs.

In addition to the higher fire hazard rating, current firefighting capabilities in the City are limited by the California Water Company due to their distribution system and aging infrastructure and the City’s topography.

**Infrastructure Constraints:**

Only a few homes on the western periphery of the City are served by a sewer system. Consequently, any new development must utilize septic tanks for disposal of sanitary waste. Recent engineering studies indicate that due to the terrain and unstable geological conditions of the City, the cost of a sewer system would be prohibitive for such a small city with limited financial resources. In 2013, there was an attempt to form a sewer assessment district pursuant to Proposition 218 (Cal Const. art. XIIID, § 4) for properties abutting Johns Canyon Road in the City, but the effort failed due to the high cost of installing the sewer line. The prohibitive cost of sewer line installation, in conjunction with recent active landslide activity, continues to constrain development densities in the City.

**Environmental Constraints:**

Environmental constraints that limit development in Rolling Hills include sensitive animal habitats and species either listed or considered for listing by the U.S. Department of Fish and Wildlife and/or the California Department of Fish and Game. These species include the Palos Verdes Blue butterfly, the California Gnatcatcher, the Pacific Pocket Mouse, the San Diego Horned Lizard, and Brackishwater Snail. The community is also underlain with blue-line streams that are under the jurisdiction of the Army Corps of Engineers.

**Topographic Constraints:**
The Rolling Hills landscape is comprised of a system of rolling hills, steep canyons and blue-line streams. It has been described as having the most severe terrain of any jurisdiction in Los Angeles County. Slopes of 25 to 50 percent are present on virtually every remaining undeveloped parcel in the City.

**Contractual Constraints:**

Rolling Hills has been largely built-out for the past thirty years. All of the developable property in the City is subject to RHCA, a non-profit California Corporation, enforceable covenants, conditions, and restrictions (CC&Rs) that run with the property in perpetuity. These CC&Rs were in place prior to the City’s incorporation, and continue to restrict development based on the community’s unique constraints.

Within the context of these overwhelming constraints, the City has actively pursued avenues to support residential development and facilitate affordable housing opportunities. Specifically, the City has adopted amendments to its Zoning Ordinance to allow for manufactured housing units and has reached out to adjacent communities to address its regional affordable housing needs. The City has conducted these efforts in compliance with State Housing Element Law as summarized below.

**B. PURPOSE OF THE ELEMENT**

The provision of adequate housing for families and individuals of all economic levels is an important public goal. It has been a main focus for state and local governments. The issue has grown in complexity due to rising land and construction costs, as well as increasing competition for physical and financial resources in both the public and the private sectors.

In response to this concern, the California Legislature amended the Government Code in 1980. The amendment instituted the requirement that each local community include a specific analysis of its housing needs and a realistic set of programs designed to meet those needs. This analysis is to be set forth in a Housing Element and incorporated in the General Plan of each municipality.

The requirements of the law are prefaced by several statements of State policy set forth in Section 65580 of the Government Code:

“... The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every California family is a priority of the highest order.”

“... Local and State governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.”

“... The legislature recognizes that in carrying out this responsibility, each local
government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the State in addressing regional housing needs."

C. LEGISLATIVE REQUIREMENTS

State law requires each municipality to accomplish the following tasks:

- To identify and analyze the current and projected housing needs of all economic segments of the community.

- To evaluate the current and potential constraints to meeting those needs, including identifying the constraints that are due to the marketplace and those imposed by the government.

- To inventory and assess the availability of land suitable for residential use.

- To establish a series of goals, objectives, policies and programs aimed at responding to the identified housing needs, the market and governmental constraints, and the housing opportunities.

D. SCOPE AND CONTENT

The Housing Element consists of five major components:

- An analysis of the City’s demographic and housing characteristics and trends.

- A summary of the existing and projected housing needs of the City’s households.

- A review of the potential market, governmental, and environmental constraints to meeting the City’s identified housing needs.

- An evaluation of the resources available to achieve the City’s housing goals.

- A statement of the Housing Plan for the years 2014 through 2021 to address the City’s identified housing needs, including the housing goals, policies and programs.

E. RELATIONSHIP TO OTHER GENERAL PLAN ELEMENTS

The Government Code requires internal consistency among the various elements of a General Plan. Section 65300.5 of the Government Code states that the General Plan and the parts and elements thereof shall comprise an integrated and an internally consistent and compatible statement of policies.
The Rolling Hills General Plan contains the following six elements: 1) Land Use; 2) Housing; 3) Circulation; 4) Open Space and Conservation; 5) Safety; and 6) Noise. The City General Plan is internally consistent. Policy direction introduced in one element is reflected in other plan elements. For example, residential development capacities established in the Land Use Element and constraints to development identified in the Safety Element and Open Space and Conservation Element are incorporated into the Housing Element. This Housing Element builds upon the other General Plan elements and is entirely consistent with the policies and proposals set forth by the Plan.

Pursuant to Government Code Section 65400, the City will annually review its progress in implementing this Housing Element and ensuring consistency between this and the City’s other General Plan Elements.

F. RELATIONSHIP TO PRIVATE LAND USE RESTRICTIONS

CC&Rs (covenants, conditions and restrictions) represent private contractual obligations between homeowners and are usually established at the time a subdivision or community is built. Development in Rolling Hills has been governed by CC&Rs since the community was planned out in the 1930’s. Rolling Hills Community Association (RHCA), composed of elected Rolling Hills community residents, oversees and enforces implementation of the CC&Rs. The RHCA and the CC&Rs existed and were in force prior to the City incorporation, which occurred in 1957.

These CC&Rs strictly limit development in the City, restricting residential density to one residence per one-acre and two-acre lots. Any construction, remodel, and grading for a building, fence or structure is required under the CC&Rs to adhere to traditional or California ranch and equestrian architectural styles and aesthetics. The uses and purposes of all perimeter easements around each property are required to be dedicated to the RHCA and maintained for the purposes of ingress, egress, construction and maintenance of all infrastructure constructed as roadways, bridle trials, storm drains, utility access and drainage.

The City of Rolling Hills has no jurisdiction over the RHCA or the content or implementation of the CC&Rs.

G. PUBLIC PARTICIPATION

Section 65583(c)(5) of the Government Code states that "[t]he local government shall make a diligent effort to achieve public participation of all the economic segments of the community in the development of the housing element, and the program shall describe this effort." For purposes of the Housing Element law, “community” means a city (Gov. Code § 65582(a)).

To gain public input to its Housing Element Update, the City of Rolling Hills conducted a public workshop before the Planning Commission on September 26, 2013 which was open to all members of the community. At that meeting, the Commission with
assistance from City staff and the housing consultant, discussed the Housing Element Update. The public was invited to comment, and offer suggestions for new housing programs. Public comments received included questions from the Planning Commission regarding feasibility of meeting the affordable housing goal given the City's topographic and infrastructure goals. The Commission also commented on the two new market rate houses currently being proposed. These two units would satisfy the City’s RHNA requirement for above moderate income housing. No members from the public attended.

Notice of the September 26th public meeting was posted at City Hall and published in the Palos Verdes Peninsula News and in the City bi-weekly newsletter. In addition, the agenda for the City Council meetings is published in the bi-weekly Newsletter, posted on City’s web-site and copy is emailed to those residents who registered for the agendas. Rolling Hills is a relatively small community and its residents are accustomed to the City’s noticing procedures. The City’s notices are made equally available to all residents of all income levels, in full compliance with Government Code Section 65583(c)(5). In addition, notices regarding the Housing Element update were provided to the cities of Rancho Palos Verdes, Rolling Hills Estates and Lomita, the County of Los Angeles, the Palos Verdes Peninsula Unified School district, the Palos Verdes Peninsula Center Library District and the Los Angeles County Local Agency Formation Commission.

Additionally, the City of Rolling Hills will conduct public hearings before the Planning Commission and City Council which will be open to all members of the community. At these meetings, additional public comment from the community will be sought relative to the Housing Element Update and the need for new housing programs. Notices of these meetings will be distributed similar to the September 26th public meeting.

H. SOURCES OF INFORMATION

A number of data sources were used to create the Rolling Hills Housing Element. These resources include:

- City of Rolling Hills General Plan, current.
- City of Rolling Hills Municipal Code, current.
- City of Rolling Hills Revised Final Environmental Impact Report, General Plan Update and Zoning Ordinance Revision; April 1990.
- City of Rolling Hills Planning Department building permit records; August 2013.
- Department of Finance Population and Housing data, January 2013.
City of Rolling Hills Hazard Mitigation Plan.

Various other informational sources were also referenced where appropriate. References to these informational sources are cited where they appear within the text.

II. HOUSING NEEDS ASSESSMENT

A successful strategy for improving housing conditions must be preceded by an assessment of the housing needs of the community and region. This section of the Housing Element reviews the major components of housing needs including trends in Rolling Hills’ population, households, and the type of housing available. These changes reflect both local and regional conditions. Consequently, the regional context is also presented.

The analysis that follows is broken down into four major subsections:

- Section A, Population Characteristics, analyzes the City of Rolling Hills in terms of individual persons and attempts to identify any population trends that may affect future housing needs.

- Section B, Household Characteristics, analyzes Rolling Hills in terms of households, or living groups, to see how past and expected household changes will affect housing needs.

- Section C, Housing Stock, analyzes the housing units in Rolling Hills in terms of availability, affordability, and condition.

- Section D, Assisted Housing At Risk of Conversion, analyzes housing units that have expiring use restrictions, such as project-based Section 8 contracts and early tax-credit financing contracts. Such projects are at risk of losing those rent restrictions within the next few years, which can result in significant rent increases for their tenants.

This assessment of Rolling Hills’ housing needs is used as the basis for identifying appropriate policies and programs in this Element.

A. POPULATION CHARACTERISTICS

Rolling Hills’ population characteristics are important factors affecting the type and extent of housing needs in the City. Population growth, age, race/ethnicity and employment characteristics are discussed in this section.

I. Population Change

Rolling Hills had a resident population of 1,860 according to the 2010 Census, and a population of 1,884, according to the State of California Department of Finance, City/County Population and Housing Estimates, January 2013. In terms of
population, Rolling Hills is the fourth smallest in Los Angeles County\(^1\). The City has been largely built-out for the past forty years.

As illustrated in Table 1, the City had a 1970 population of 2,050 and a 1980 population of 2,049. By 1990, according to the Census, the City population had dropped to 1,871. This decrease from 1980 to 1990 includes some population lost as a result of the damage from previous landslides and fires, including the Flying Triangle Landslide, in which ten homes were destroyed by fire in or near the Flying Triangle Active Landslide Area in the southern portion of the City.

The City population remained stagnant from 1990 to 2000, and decreasing by 0.6 percent according to the 2010 census. The 2013 state of California Department of Finance estimates a slight increase of 1.3 percent. By comparison, the County of Los Angeles population increased from 9,519,330 in 2000 to 9,818,605 in 2010, by 3.0 percent.

Limited growth in the City’s population demonstrates the diminishing supply of parcels available for development. Opportunities for new residents to move into Rolling Hills have occurred primarily through redevelopment of the City’s original housing stock and changes in ownership.

2. Age Characteristics

The age structure of a population is an important factor in evaluating housing needs and planning future housing development. For example, if a city is experiencing an outmigration of young adults (ages 25-34), there may be a shortage of first-time homebuyer opportunities and/or well-paying employment opportunities. If a city has a substantial elderly population, special housing types or services may be needed, such as assisted living facilities, housing rehabilitation programs, paratransit, meals on wheels, and home health care services, in order to enable seniors to remain in the community. Table 2 shows the number and percentages of Rolling Hills residents in each age group according to data from the Census 2010. The table also shows the median age for the City and County of Los Angeles.

Rolling Hills is a maturing community. During the past 20 years, its median age has increased from a 1980 median age of 38.2 years, to a 1990 median age of 45.5 years to a 2010 median age of 53 years. By comparison, the 2010 Los Angeles County median age was 35.9 years.

3. Race and Ethnicity

As shown in Table 3, the 2010 Census reported that 77.3 percent of Rolling Hills’ population was white, which compared to 50.3 percent for the County overall. Rolling Hills’ Black or African American population at 1.6 percent was lower than the County Black or African American population at 8.7 percent. American Indian or Alaskan Native comprised very small percentages of both the City and County population, 0.3 percent and 0.7 percent, respectively. Asians comprised 16.3 percent of Rolling Hills’ population, compared to 13.7 percent for the County. Native Hawaiian or other Pacific Islander also comprised very small percentages of the City and County population, 0.1 percent and 0.3, respectively. An estimated 1.3 percent of Rolling Hills’ residents indicated that they are of “other race”; for the County, the percentage of people identifying themselves as “other race” was notable larger, 21.8 percent. Rolling Hills’ residents who identified themselves as Hispanic or Latino comprised 5.5 percent of the City population. For the County, this percentage was much larger, with 47.7 percent of the population identifying themselves as Hispanic or Latino.

4. Employment

The 2010 Census shows that 54 percent of Rolling Hills' residents were in the labor force. Of these workers, 89.1 percent commuted outside the City to work, while 10.9 percent worked from their homes.

Most of Rolling Hills’ workers (72.1 percent) were employed in management, professional and related occupations. An estimated 16.6 percent worked in sales; 10.3 percent in service industries; 0.6 percent in natural resources, construction and maintenance; and 0.4 percent in production transportation, and material moving occupations.

There is no commercial or industrially zoned land in the City. City Hall is located on the only institutionally zoned land in the City. Consequently, employment in the City is limited to home-based occupations and jobs at City Hall and the Rolling Hills Community Association office. No significant change in the number of jobs in Rolling Hills is expected since no new source of employment is expected in the future.

B. HOUSEHOLD CHARACTERISTICS

Information on household characteristics is an important indicator of housing needs in a community. Income and affordability is best measured at the household level, as are the special housing needs of certain groups such as large families and female-headed households. As an example, if a community has a substantial number of young family households whose incomes combined with local housing costs preclude the option of
home purchase, the city may wish to initiate a home-buyer assistance program or participate in or publicize the programs that are available elsewhere.

The Bureau of the Census defines a "household" as “all persons who occupy a housing unit, which may include families, singles, or other.” Boarders are included as part of the primary household by the Census. Families are households related through marriage or blood, and a single household refers to individuals living alone. "Other" households reflect unrelated individuals living together (e.g., roommates). Persons living in retirement or convalescent homes, dormitories, or other group living situations are not considered households.

1. Household Type

As shown in Table 4, there were a total of 663 households in Rolling Hills according to the 2010 US Census Report. Most of these households (81.3 percent) are family households, compared to 67.7 percent family households for the County.

Rolling Hills’ average household size is 2.81 persons per household, and slightly lower than the 2.98 persons per household for the County. Family households are somewhat larger, 3.08 persons per household for the City and 3.58 persons per household for the County.

<td>3.58</td>
</tr>
</tbody>
</table>

2. Overcrowding

Overcrowding is another indicator of housing affordability. Unit overcrowding is caused by the combined effect of low earnings and high housing costs in a community, and reflects the inability of households to buy or rent housing that provides sufficient living space for their needs. The Census defines overcrowded households as units with greater than 1.01 persons per room, excluding bathrooms, hallways and porches.
According to the 2010 Census, there is no overcrowding in Rolling Hills, with no households reporting more than one person per room. By comparison, 4.9 percent of Los Angeles County households reported incidences of overcrowding (more than 1.5 persons per room). A low incidence of overcrowding in Rolling Hills is expected to continue through the current planning period.

3. Household Income

An important factor in housing affordability is household income. While upper income households have more discretionary income to spend on housing, low and moderate-income households are more limited in the range of housing they can afford.

State-Defined Income Categories

According to the Federal Department of Housing and Urban Development (HUD) and the California Department of Housing and Community Development (HCD), the area median income for a four-person household in Los Angeles County was $64,800 in 2013. California law and some federal housing programs define several income categories based on a percentage of the area median income (AMI) determined by HUD and HCD, as follows:

- Extremely Low Income - 30 percent of the area median income and below
- Very Low Income - between 31 percent and 50 percent of the area median income
- Lower Income - between 51 and 80 percent of the area median income
- Moderate Income - between 81 and 120 percent of the area median income.

These income ranges are used to determine eligibility for various subsidized housing programs. The 2013 income limits for these categories by household size are presented in Table 5, as follows:

Census 2010 Estimates of Household Income

According to Census 2010 estimates, median household income in Rolling Hills was $223,750, compared to $56,226 for the County. Rolling Hills' higher median household income reflects the single family, large lot nature of the community. Table 6 shows the median income for Rolling Hills, neighboring cities and the County as reported by the 2010 Census.

Table 7, below, shows the percent of Rolling Hills' households by income range. Approximately 15.0 percent of Rolling Hills' households report income below $50,000 per year, an income level usually associated with low income households. Approximately 6.0 percent of Rolling Hills households report income below $25,000 per year, an income level usually associated with extremely low income households. Based on the 2010 Census estimate of 663 households, this could mean that as many as 41 Rolling Hills households are extremely low income.

Government Code Section 65583(a) requires jurisdictions to analyze the housing need for its extremely low income population. According to the 2010 Census, 90.8 percent of houses in Rolling Hills are valued at over $1,000,000, with about 5 percent valued at under $200,000. Recent for sales data for September 2013 shows a median for-sale housing price of about $5,500,000, with the lowest for sale price at $2,225,000.
Because of the very high value of houses in Rolling Hills, it is likely that the approximately 40 households with declared incomes under $25,000 have other financial assets that allow them to continue to live in Rolling Hills. Consequently, these households are likely not extremely low income and do not have a need for affordable housing options such as single-room occupancy housing or rental vouchers. This conclusion is further supported by the poverty status information for the City. No Rolling Hills families had incomes at or below the 2009 federal poverty level; for Los Angeles County, this percentage was 13.0 percent.

4. Special Needs Groups

Certain segments of the population may have more difficulty finding decent, affordable housing due to special circumstances. These “special needs” groups include the elderly, large families, disabled persons, female-headed households, farm workers, and the homeless. Under State law, the housing needs of each group are required to be addressed in the Housing Element. This information is summarized in Table 8. The identified special needs groups are defined below:

**Elderly and Frail Elderly**

The special needs of many elderly households result from their fixed incomes, higher rate of physical disabilities and common need for assistance from others. Elderly is defined as age 65 or older. In 2010, 513 or 27.9 percent of Rolling Hills’ population were 65 or older. As shown in Table 8, households with elderly persons comprised 340 or 51.3 percent of all Rolling Hills households. By comparison, countywide, 10.9 percent of County persons were 65 or older households were headed by a person 65 years or older, and 24.4 percent of County households had members 65 years or older.
Senior households are likely to be on fixed low incomes and at a greater risk of housing over payment. In terms of housing, seniors typically require smaller, more affordable housing options and/or assistance with accessibility and home maintenance. They often require ramps, handrails, lower cupboards and counters to allow greater access and mobility for wheelchairs or walkers. Because of their limited mobility, the elderly also often need to live close or have transportation assistance to shopping and medical facilities.

According to the 2000 Census, of those Rolling Hills residents that are elderly, 19.1 percent have disabilities, which include sensory, physical and mental disabilities.

As discussed above, the median age for the City is much higher than the County, 53.0 years compared to 35.9 years. Although most of Rolling Hills elderly are expected to be upper income, there is expected to be a continued need for accessible housing and senior related services throughout the planning period.

**City Approach to Meeting Elderly Needs:** In previous years, the City of Rolling Hills has assigned a portion of its Community Development Block Grant (CDBG) allocation to the adjacent city of Lomita to support its senior center and senior housing developments. In recent years, the City of Lomita has not requested Rolling Hills’ funds for senior housing. Most recently, due to the administrative burden associated with maintaining a CDBG program, the City no longer participates in the program. To continue to assist its elderly residents find needed services, the City has available at City Hall a list of local senior facilities. These facilities are listed below.

Disabled Persons

Physical and mental disabilities can hinder access to housing units of conventional design as well as limit the ability of the disabled individuals to earn an adequate income. The proportion of physically disabled individuals is increasing nationwide due to overall increased longevity and lower fatality rates. Mentally disabled individuals include those disabled by a psychiatric illness or injury, including schizophrenia, Alzheimer’s disease, AIDS-related infections and conditions related to brain trauma. Disabilities tabulated by the Census include sensory, physical and mental limitations.

A tabulation of disabled persons in Rolling Hills is not included in the 2010 Census. However, according to the 2000 Census, 152 of all Rolling Hills residents (8.1 percent of the City population) were identified as disabled. Disabilities of these residents included each of the categories tabulated by the Census, with most persons having physical disabilities.
Of Rolling Hills’ disabled residents (152 total), 15 (or 9.9 percent) were aged 5 to 20 years old, 58 (or 38.1 percent) were aged 21 to 64 years old, and 79 (or 52.0 percent) were aged 65 years or older. Of the disabled adults aged 21 to 64, 88 percent were employed outside the home, compared to 65 percent of non-disabled adults.

Countywide, 18 percent of the population is identified as disabled. Of these disabled County residents, 10 percent were aged 5 to 20 years old, 67 percent were aged 21 to 64 years old, and 23 percent were aged 65 years or older. Of the disabled County adults aged 21 to 64, 54 percent were employed outside the home, compared to 69 percent of non-disabled adults aged 21 to 64.

Rolling Hills disabled residents are generally more active (employed) and older (elderly) than County residents as a whole. However with the large percentage of City disabled adults working (88 percent) and the upper income character of the community suggest that disabled persons in Rolling Hills can afford to modify their housing to accommodate special needs. This information indicates that in Rolling Hills disabled do not represent a special needs group.

Pursuant to SB 812 (Lanterman Act), cities must include in their Housing Elements an analysis of the special housing needs of the disabled including persons with developmental disabilities. The Harbor Regional Center, located in Torrance, provides services to Rolling Hills’ residents with developmental disabilities pursuant to the Lanterman Act. The Harbor Regional Center is a private, not-for-profit corporation that serves over 10,000 people with developmental disabilities, and their families, who reside in the South Bay, Harbor, Long Beach, and southeast areas of Los Angeles County.

Within Rolling Hills, the Harbor Regional Center served 1 child aged 3-years old, 1 child aged 4-years old, 1 child aged 5-years old, 3 children aged 7-years old, 1 child aged 8-years old, 2 children aged 9-years old, 2 children 10-years old, 1 child aged 11-years old, 3 children aged 12-years old, and 2 children aged 13-years old.3

**City Approach to Meeting Disabled Needs:** Although disabled persons are not an identified special needs group in the Rolling Hills, the City recognizes that regardless of income, disability can block adequate access to housing. The City has adopted Resolution 699 that certifies its recognition of the American with Disabilities Act and adopts necessary mitigation efforts to assist its disabled residents.

The City’s continued commitment to meeting the needs of the disabled is summarized in Section V.C. Housing Implementation Plan (2014-2021).

---

3 Nancy Spiegel, Director of Information and Development, Harbor Regional Center, 21231 Hawthorne Blvd., Torrance CA 90503; September 5, 2013.
Female-Headed Households

Single-parent households require special consideration and assistance because of their greater needs for day care, health care, and other facilities. Female-headed households with children in particular tend to have lower incomes, thus limiting housing availability for this group.

According to the 2010 US Census Report, Rolling Hills has 3 female-headed households with children 18 years or younger. These 3 households, which comprise 1 percent of all Rolling Hills households, are expected to be upper income. Countywide, female-headed households with children 18 years or younger also comprise 8 percent of total households. Of these County households, 13 percent live in poverty.

Because the female-headed households in Rolling Hills are expected to be predominately upper income, they are not expected to be constrained by the needs for day care, health care or housing. This information suggests that in Rolling Hills female-headed households do not represent a special needs group.

City Approach to Meeting Female-Headed Households Needs: Because female headed households are not an identified need in the Rolling Hills, the City does not have active programs or policies to address this need.

Large Households

Large households are identified in State housing law as a “group with special housing needs based on the generally limited availability of adequately sized, affordable housing units.” Large households are defined as those with five or more members. As noted in Table 4 above, Rolling Hills has a smaller average household and family size than the County. Also, no City housing units meet the definition of overcrowded.

Rolling Hills has the housing stock to accommodate large households. According to the 2010 Census, the average number of rooms per housing unit in the City is 6.9 compared to 4.6 for the County. Large family households in Rolling Hills are expected to be predominately upper income and adequately housed in the City’s larger single-family homes. This information indicates that in Rolling Hills large households do not represent a special needs group.

City Approach to Meeting Large Households Needs: Because large households are not an identified need in the Rolling Hills, the City does not have active programs or policies to address this need.
Farm Workers

The special housing needs of many agricultural workers stem from their low wages and seasonal nature of their employment. An estimate of the "farm worker" population in the City is extrapolated from individuals who categorize their employment as "farming, fishing or forestry" in the 2010 Census.

Based on this estimate, there is one Rolling Hills' worker who identified him/herself as employed in this farming category. Because of the high median income in the City, this worker is expected to be of above moderate income. There are no designated agricultural uses in or adjacent to Rolling Hills. Consequently, farm workers are not a special housing needs group in Rolling Hills.

City Approach to Meeting Farmworker Needs: Because farm workers are not an identified need in the Rolling Hills, the City does not have active programs or policies to address this need.

Homeless

During the past decades, homelessness had become an increasingly reported problem throughout the state. Factors contributing to the rise in homelessness include the general lack of housing affordable to low and very low income persons, increases in the number of persons whose incomes fall below the poverty level, reductions in public subsidies to the poor, and the de-institutionalization of the mentally ill.

According to the Los Angeles Homeless Services Authority (LAHSA) 2013 Greater Los Angeles Homeless Count Executive Summary, there are 59,233 homeless persons in Los Angeles County. There are currently over 80 homeless shelters and numerous other emergency shelters, transitional housing facilities, hospital emergency rooms, motels that assist Los Angeles County homeless. The homeless facilities closest to Rolling Hills include Beacon Light Mission in Wilmington that currently provides 7 temporary beds for homeless men plus meals. While no one has been turned away from the dining tables in over a year, the beds are usually full. The Mission finds that the majority of its clients are people searching for work in the harbor area.

Other nearby homeless facilities include the American Family Housing (AFH), a nonprofit organization that provides emergency, transitional and permanent housing. AFH operates in Los Angeles, Orange, and San Bernardino counties and is currently helping 1,170 persons each day with shelter. In the South Bay area of Los Angeles, it operates a 20-unit two-story apartment complex that features an outdoor play area and indoor children's recreation room. Occupants can stay at the shelter for up to 90-days. During that stay, the occupants meet with caseworkers and attend workshops on

---

various topics, including budgeting, parenting and nutrition. They receive assistance on building a resume and seeking employment as well as free and reduced-cost childcare.

Harbor Interfaith Shelter in San Pedro provides housing to people each day in its emergency, transitional and low-income permanent housing. In 2012, it provided housing services to 18,000 persons. The shelter also provides meals, personal counseling, and educational and vocational services. Toberman Settlement House is a non-profit neighborhood center providing services to low-income residents of Los Angeles. Its efforts are aimed at helping individuals and families move from poverty to self-sufficiency. Founded in 1903 in the name of two-term Mayor James R. Toberman, Toberman House is the oldest charity in the city of Los Angeles, and the oldest United Methodist mission project in the Western U.S. It was originally located in Echo Park, but moved to Boyle Heights in 1917, then San Pedro in 1937. Toberman House offers a wide range of social services, ranging from state-licensed K through 5 childcare, and afterschool care, to a senior's club.

Recent contacts with each of these agencies indicate that they are fully occupied, but have no record of patrons who have listed Rolling Hills as their previous place of residence. Part of the reason for this is that the City is not located along a major street, with other services or businesses, which would attract transient and homeless persons. Additionally, Rolling Hills' gated entries, which are monitored by the Rolling Hills Community Association and the rugged terrain provide a difficult environment for the homeless.

City Approach to Meeting Needs of Homelessness: Senate Bill 2 of 2007 (SB 2) requires that jurisdictions quantify the need for emergency shelters and determine whether existing facilities are adequate to serve the need. If adequate existing facilities are not available, the law requires jurisdictions to identify areas where new facilities are permitted “by-right” (i.e., without requiring discretionary approval such as a use permit), or to accommodate the need through a multi-jurisdictional agreement. No homeless persons have been identified in or being from Rolling Hills. Consequently, there is no quantified need for emergency shelters in Rolling Hills.

As discussed in Section III of this Element, numerous constraints make the rezoning of property in Rolling Hills to accommodate emergency shelters infeasible. Physical limitations of the City include:

- Steeply sloping hillsides;
- Landslide hazards;
- Lack of urban infrastructure, specifically sewer;
- Danger of wildland fires; and
- Sensitive animal habitats and species.

Contractual limitations further prohibit rezoning opportunities in the City. The RHCA has enforceable CC&Rs that run with the property in perpetuity. These CC&Rs have

---

7 [http://www.harborinterfaith.org/about.html](http://www.harborinterfaith.org/about.html); accessed September 22, 2013.
been in place prior to the City’s incorporation, and continue to restrict development to low density single family based on the community’s unique constraints.

Although Rolling Hills has no feasible or suitable sites for permanent emergency shelters or transitional housing, there are over 80 emergency shelters plus numerous other facilities assisting homeless persons in the Los Angeles area, with the Beacon Light Mission in Wilmington being the closest to Rolling Hills.

Despite the lack of a quantified need for emergency shelters in Rolling Hills, the City is committed to addressing homelessness in the region and to complying with SB 2. Toward this end, the City is committed to coordinating with and directing any homeless person(s) to local social service providers if the need arises in the future. A list of nearby social service agencies and shelters is shown in the Housing Element and is maintained by the City Clerk. In addition, the Sheriff Department directs homeless individuals to local shelters.

**Transitional and Supportive Housing**

SB 2 requires jurisdictions to allow transitonal and supportive housing in all residential zones only subject to those restrictions that apply to other residential dwellings of the same type in the same zone. Transitional and supportive housing are allowed in the two residential zones within Rolling Hills consistent with state law. As discussed in Section V.B of this Element, none of the reasonably available properties in the City of Rolling Hills could realistically develop at a density greater than 1 unit per acre, making development of multifamily transitional or supportive housing infeasible.

**City Approach to Meeting Transitional and Supportive Housing Needs:**
The City is committed to addressing transitional and supportive housing needs within its residential zones consistent with state law. The City also is committed to coordinating with and directing any person seeking transitional or supportive housing to local social service providers if the need arises in the future. A list of nearby social service agencies and shelters is shown in the Housing Element and is maintained by the City Clerk.

**Single-Room Occupancy (SRO) Units**

SB 2 also requires that a jurisdiction describe whether zoning is available to allow SROs. An SRO unit usually is small, between 200 to 350 square feet. These units provide a valuable source of affordable housing for individuals and can serve as an entry point into the housing market for formerly homeless people. HCD’s website notes that many older SROs have been lost due to deterioration, hotel conversions, and demolition.\(^8\) HCD recommends that jurisdictions both identify zoning and development standards that will allow and encourage the construction of new SROs, and commit to preserving and rehabilitating existing residential hotels and other buildings suitable for SROs.

As discussed above, numerous constraints make the rezoning of property in Rolling Hills infeasible and continue to restrict development to low density single family. No hotels exist in Rolling Hills.

**City Approach to Meeting SRO Housing Needs:** Although Rolling Hills has no feasible or suitable sites for SRO zoning or development, there are over 80 emergency shelters plus numerous other facilities assisting homeless and persons needing minimal housing in the Los Angeles area. The City is committed to coordinating with and directing any person seeking assisted housing local social service providers if the need arises in the future. A list of nearby social service agencies and shelters is shown in the Housing Element and is maintained by the City Clerk.

### C. HOUSING CHARACTERISTICS

A housing unit is defined as a house, apartment, mobile home, or a single room occupied as a separate living quarter or, if vacant, intended for occupancy as a separate living quarter. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from the outside of the building or through a common hall. A community's housing stock is the compilation of all its housing units.

#### 1. Housing Growth

Rolling Hills has been largely built out for the last thirty years. The supply of buildable land has become increasingly constrained by fires, landslides and identification of biologically sensitive species. Since 1990, the City has gained a net of 10 units. Rolling Hills' housing supply has grown from a 1990 Census count of 674 units, to a 2000 Census count of 675 to a 2010 census count of 693 units. This represents an average growth rate of 2 percent per year.

While the limited availability of land suitable for residential development has resulted in only nominal increases in the City's housing stock, additional residential development has been occurring through redevelopment of existing units. Much of the City's housing stock was built in the 1950s, and is typified by 3,000 to 4,000 square-foot ranch style homes. As in many communities with a strong market for residential development and limited available land, Rolling Hills' older housing stock is being replaced with much larger, expansive units averaging 6,000 to 9,000 square feet in size, according to City building permit records. This trend of residential recycling can be expected to continue and potentially increase as less vacant land is available for development.

#### 2. Housing Type

Rolling Hills is a community of single family houses. Some of these homes are expected to include guest units. According to the 2010 Census, there are 693 single family units. The RCHA prohibits renting such guest units because of the community’s limited sewer and water capacity.
3. Age and Condition of Housing Stock

Most homes begin to exhibit signs of decay when they approach thirty years of age. Common repairs needed include new roofs, wall plaster and stucco. Homes thirty years or over with deferred maintenance require more substantial repairs, such as new siding, plumbing or multiple repairs to the roof, walls, etc. As illustrated in Table 9, the majority of Rolling Hills’ housing (51 percent) was constructed before 1960. Due to a diminishing supply of available land, development in Rolling Hills slowed significantly in the past two decades.

</table>

The fact that the large majority of the City’s housing stock is owner-occupied, combined with the high quality of residential construction, has resulted in excellent upkeep of the City’s units. According to the City code enforcement files, no significant housing condition problems have been identified.

Code enforcement in the City is the responsibility of the Planning Department. In response to complaints, the City Planning Director makes site inspections in the community. Any code enforcement violations noted by the Director or called in by a resident is typically handled by a site inspection and phone call to the resident causing the violation. If the phone call fails to resolve the violation, the Director will follow-up with a letter. There are very few code violations regarding residential structural deficiencies in the City of Rolling Hills, and during this planning period, all noted violations have been resolved with a phone call or a letter.

**City Housing Maintenance Efforts:** Because housing maintenance is not an identified need in the Rolling Hills, the City does not have active programs or policies to address this need.
4. Housing Costs

Housing costs are driven by the price of raw land, infrastructure costs (e.g. sewer and water), construction costs, supply relative to demand, and financing costs. The diminishing supply of developable land in Rolling Hills and the recent rapid rise in residential real estate prices that has occurred throughout the southern California region, have driven up the cost of both ownership and rental housing in Rolling Hills.

Ownership Housing

All ownership housing in Rolling Hills is single family homes. Minimum lot size as established by the RHCA is one acre. The value of these homes varies based on the type, size and location.

According to the 2010 Census, 90.8 percent of houses in Rolling Hills are valued at over $1,000,000. Recent for sales data for September 2013 shows a median for-sale housing price of about $5,500,000.9

As shown in Table 10 below, Rolling Hills’ housing prices are similar to most of its neighboring communities.

Rental Housing

The rental housing market in Rolling Hills is comprised only of single family homes. Because of the large estate lots and limited supply of available housing in the community, rental rates are currently between $3,500 per month and $9,900 per month.10 At these prices, only upper income households could afford to rent in Rolling Hills.

Vacancy Rates

---

9 Zillow.com; accessed 9/30/2013.
10 Ibid.

January 2, 2014
The residential vacancy rate, a translation of the number of unoccupied housing units on the market, is a good indicator of the balance between housing supply and demand in a community. When the demand for housing exceeds the available supply, the vacancy rate will be low. Concurrently, a low vacancy rate drives the cost of housing upward to the disadvantage of prospective buyers or renters.

In a healthy housing market, the vacancy rate would be between 5.0 and 8.0 percent. These vacant units should be distributed across a variety of housing types, sizes, price ranges and locations within the City. This allows adequate selection opportunities for households seeking new residences.

According to the 2010 Census, Rolling Hills' owner-occupied housing units have a vacancy rate of 5 percent. This rate indicates that the housing market is relatively healthy with some room for buyers to find a suitable unit or negotiate a lower purchase price.

**Household Tenure**

According to the 2010 Census, 97.5 percent of the City's housing units were owner-occupied, with 2.5 percent renter-occupied.

**Housing Affordability and Overpayment**

Federal and state guidelines specify that households should not spend more than 30 percent of their gross income on housing. Census information provided by HCD indicates that 2 of 15 (13.0 percent) of Rolling Hills' renter households and 206 of 598 (34.0 percent) of owner households paid more that 30 percent of their income on housing.

Table 11, below, estimates the maximum housing costs affordable to Very Low Income, Low Income and Moderate Income households based on HCD established income criteria. In the case of rent, the 30 percent assumes utilities are included in the monthly rental cost. Utilities may include water, sewer, trash pickup, electric and gas, and may add $100 to the monthly cost of a rental unit, exclusive of heating and cooling.

In the case of purchase, the 30 percent includes payment on mortgage principal and interest, plus property tax, homeowner insurance and utilities. To purchase a home, the buyer typically needs to put 20 percent of the housing cost down at the time of purchase.

As indicated in Table 11, maximum housing costs affordable to an Extremely Low Income four-person household are $136,015 to purchase a home and $691 per month to rent a home. For a Very Low Income four-person household, maximum costs are $210,048 to purchase a home and $1,068 per month to rent a home. For a Low Income four-person household, the maximum affordable housing costs are $335,979 to purchase a home and $1,708 per month to rent a home. For a Median Income four-person household, the maximum affordable housing costs are $318,762 to purchase a
home and $1,620 per month to rent a home. For a Moderate Income four-person household, the maximum affordable housing costs are $382,465 to purchase a home and $1,944.00 per month to rent a home.

As presented above, the current cost to purchase a home in the City currently begins at about $2,225,000. With a 20 percent down, this price would require a $399,800 down payment and a monthly payment of about $8,350. These costs, as indicated in Table 11, are certainly well above the reach of the Extremely Low and Very Low, Low, Median and Moderate Income households.

Rental housing in Rolling Hills starts at $3,500 per month. These rents are certainly well above the reach of the Extremely Low and Very Low, Low, Median and Moderate Income households.

As discussed under Section B.3 above, because of the very high value of houses in Rolling Hills, it is likely that households with declared incomes in the lower income ranges have other financial assets that allow them to continue to live in Rolling Hills. Consequently, it is unlikely that Rolling Hills' households are lower income. Rolling Hills households that report paying more than 30 percent of their income for housing are unlikely to qualify for federal or state sponsored housing programs or have a need for other affordable housing options.

1) Rental affordability based on 30% of income. Assummes utilities included
2) Home purchase based on monthly payment of 30% of income, with 20% down, 4.75% interest rate for 30 years. Assumes tax, insurance and utilities are included.

D. ASSISTED HOUSING

State law requires the City to identify, analyze and propose programs to preserve housing units that are currently deed restricted to low income housing use and will possibly be lost as low-income housing as these deed restrictions expire. There are no identified at risk housing units in the City. No low income housing units in the City have been constructed with the use of federal assistance programs, state or local mortgage revenue bonds, redevelopment tax increments, in-lieu fees, or inclusionary
housi
ng ordinance or density bonuses. As a result, there is no housing at risk of losing its subsidized status, and no further discussion of at risk units is required.

III. CONSTRAINTS ON HOUSING PRODUCTION

A variety of factors adds to the cost of housing in Rolling Hills and constrains the provision of affordable units. These include market, governmental, contractual, infrastructure, topographic, geologic and environmental constraints. Potential and actual constraints to the development, maintenance and improvement of housing for persons with disabilities also impact housing production and availability.

The extent to which these constraints are affecting the supply and affordability of housing in the City of Rolling Hills is discussed below.

A. MARKET CONSTRAINTS

The most significant factor affecting the affordability of housing within the City of Rolling Hills is the market. With the desirability and limited supply of hillside land, houses in a hillside community like Rolling Hills are highly valued. These costs are further driven by high construction costs, labor costs, and construction liability concerns.

I. Land Costs

The single largest cost associated with building a new house in Rolling Hills is the cost of land. Land costs include the cost of raw land, site improvements, and all costs associated with obtaining government approvals. Like the entire Palos Verdes Peninsula, land costs are extremely high in Rolling Hills due to its proximity to the Pacific coast, dramatic rolling hills topography that tends to yield large lots, and opportunities for canyon, ocean and city views. Average cost for an undeveloped, unimproved parcel of residential land in the City is $544,000 per acre.\(^\text{11}\)

In addition to raw land costs, site improvements contribute to the cost of land in the City. The remaining vacant parcels in the City have severe topographic and/or geologic constraints that would necessitate significant grading to accommodate development. The extremely high land costs would make construction of lower income housing in the City impossible without government subsidy. The City has very limited resources because it is not eligible for state or federal funds. There are no commercial enterprises in the City, therefore the City does not receive any sales tax income.

2. Construction Costs

A major cost associated with building a new house is the cost of building materials, which typically comprise between 50 to 60 percent of the for-sale price of a home. According to construction industry indicators, overall construction costs rose over 30 percent during the past decade, with rising energy costs and competition for building materials from overseas markets significant contributors. Typical residential construction costs for high quality homes like those found in Rolling Hills are approximately $330-500 per square foot. Construction of septic tanks adds tremendous cost to the construction of homes. Additionally, residential amenities (e.g., pools, fireplaces, porches) and high end construction materials further increase the cost of construction.

Labor is another major cost component in building a house, constituting an estimated 17 percent of the costs of constructing a single-family dwelling.

Construction costs are generally controlled by the market, and types of amenities and construction materials are generally selected at the discretion of the property owner and/or developer. However, the City Zoning Ordinance allows for manufactured housing units that can help to reduce residential construction costs.

3. Financing

Home mortgage interest rates have been at historic lows during the past ten years. However during the past year, there has been a sharp rise in foreclosures in the subprime mortgage market. Recent increases in interest rates coupled with declining property values in the Los Angeles region has caused many homeowners to default on the mortgages. Unable to recoup their investments, a number of lenders have had to shut down or file for bankruptcy.

This mortgage crisis had made qualifying for a home loan more difficult. Although 30-year fixed rate mortgages are still available at about 5.0 percent, the income and down payment requirements are more stringent. There are also fewer flexible loan programs to bridge the gap between the amount of a required down payment and a potential homeowner’s available funds.

B. GOVERNMENTAL CONSTRAINTS

Housing affordability is affected by factors in both the private and public sectors. Actions by the City can have an impact on the price and availability of housing in the City. Land use controls, site improvement requirements, building codes, fees and other local programs intended to improve the overall quality of housing may have the unintended consequence of serving as a constraint to housing development.

1. Land Use Controls
Land Use Controls are established by the City’s General Plan Land Use Element, Zoning Ordinance, and Community Association Building Regulations. The Rolling Hills Land Use Element provides for two residential categories: Residential Agricultural Suburban - one acre minimum (RA-S-1) and Residential Agricultural Suburban - two acre minimum (RA-S-2). As summarized in Table 12, building coverage is limited to twenty percent of the net lot area. Total lot coverage (structures and hardscape) is limited to thirty-five percent of the net lot area; maximum disturbed area is limited to forty percent of the net lot area; and building height is restricted to one-story. These development standards reflect the requirements of the CC&Rs and therefore do not themselves constrain housing supply.

A minimum of two covered parking spaces are required for each dwelling unit. This parking requirement can easily be met on the City’s large residential parcels. The parking standard is appropriate given the high number of automobiles per household in Rolling Hills, and the fact that there are no sidewalks, curbs or gutters on the private streets, which are too narrow to permit on-street parking. The City has implemented in its Zoning Ordinance standards to allow the development of manufactured homes in its residential zones.

*Note: All property is Rolling Hills is subject to perimeter easements varying in width around each property boundary and road easements, granted by the property owner to the RHCA, a private corporation, or another person or entity for the purpose of construction and/or maintenance and use of streets, driveways, trails, utility lines, drainage facilities, open space, and/or a combination of these uses. The RHCA requires that all easements must be kept free of buildings, fences, plantings or other obstructions.

Source: City of Rolling Hills

The City defines a “second unit” as a detached or attached dwelling unit which provides complete, independent living facilities for one or more persons including permanent provisions for living, sleeping, cooking, and sanitation, on the same parcel as the primary residential structure. State law encourages the development of second units on single-family lots. The City of Rolling Hills permits guest houses, attached or detached to the main residence that may have separate living and bath quarters, but not separate kitchen and dining facilities.
Because of the unique infrastructure, geologic and fire safety constraints within Rolling Hills, second units may pose adverse impacts on public health, safety and welfare. The City of Rolling Hills has adopted an ordinance that prohibits second units on single-family lots. The ordinance makes the following findings that specify the adverse impacts on public health, safety and welfare that would result from allowing second units, and which justify their preclusion in Rolling Hills:

- **Lack of Sewers** - Development of second units could potentially double the amount of sewage effluent currently entering the soil thereby exacerbating soil stability problems. As noted previously, recent engineering studies indicate that due to the terrain and unstable geological conditions of the City, the cost of a sewer system would be prohibitive for such a small city with limited financial resources. Indeed, a recent attempt to form a sewer assessment district for properties abutting Johns Canyon Road in the City failed due to the high cost of installing the sewer line.

- **Geologic Setting** - Numerous active landslides in Rolling Hills greatly diminish development potential and call for caution in increasing densities.

- **Rural Design and Community Roadway Character** - The current capacity, design, and topographic constraints of the City roadways indicate increased residential densities would compromise road safety.

- **Fire Flow Requirements** - The introduction of second units in Rolling Hills would change the infrastructure requirements on water facilities in the City. The California Water Company owns and maintains water lines in the City and the Utility has no plans to upgrade the aging water system. Therefore, fire-fighting capabilities could be compromised due to aging system, which could result in reduction in water pressure.

The existing zoning standards respond to the unique physical, health, and safety aspects of the City. Based on infrastructure, geologic and environmental constraints, most land in the City has developed at a density less than that permitted by City zoning.

City land use controls respond to Rolling Hills’ unique topographic, geologic, infrastructure and contractual constraints. The City General Plan and zoning standards are considered appropriate to protect the health and welfare of the community, while complying with Government Code Section 65883(c)(3) to remove or limit where appropriate and legally possible, governmental constraints to the maintenance, improvement, and development of housing. City land use controls do not represent a governmental constraint to the provision of housing.
To modify the City existing zoning standards as requested by HCD’s December 11, 2013 correspondence\textsuperscript{12} would put future residential structures at risk of geologic failure and would compromise the function and safety of the City’s wastewater and street systems.

2. Fees and Improvements

Various fees and assessments are charged by the City and other agencies to cover the costs of processing permits and providing services and facilities, such as utilities, schools, and infrastructure. Almost all of these fees are assessed through a pro rata share system based on the magnitude of the residence's impact or on the extent of the benefit that will be derived.

A summary of residential development fees in the City is presented in Table 13. Costs required for all residential development projects are indicated. These costs include various City fees, school impact fees, water service fees, environmental review fees and a RHCA fee. Costs required for special circumstances apply to residential developments requiring greater discretionary reviews.

Source: City of Rolling Hills, September 2013

Fees for City’s review under the Site Plan Review process for a typical new house in Rolling Hills averages between $1,700 and $2,450. The plan check and building permits for the actual construction are based on the Los Angeles County adopted schedule of fees, plus City’s administrative costs. The majority of City fees have remained unchanged for the past fifteen years, and are in line with or lower than development fees of Los Angeles County and other local communities. For example, the Los Angeles County 2013 fee schedule indicates that the cost for a Negative Declaration is $3,022 (compared to $1,000 for Rolling Hills), the cost for a tentative tract map is $21,436 (compared to $1,500 for Rolling Hills), and the cost for a zone change is $12,844 (compared to $2,000 for Rolling Hills).13 This information demonstrates that Rolling Hills’ development fees do not present an excessive constraint to development.

3. Processing Times

Single family residential development is permitted “by-right” (i.e., without requiring discretionary approval such as a use permit) in both the RA-S-1 Zone and RA-S-2 Zone. Multifamily residential development is not permitted for the public health and safety reasons stated in Section III.B.1, above.

The City typically requires two to three months to complete the processing of a residential development application in both the RA-S-1 Zone and RA-S-2 Zone. This timing complies with the time limit requirements established by Sections 65943 and 65950 of the Government Code, and does not present an excessive constraint to development.

4. Fire Safety Standards

As discussed above, effective July 1, 2008, all land in the City of Rolling Hills was upgraded one level to “Very High Fire Hazard Severity Zone” (VHFHSZ). As a result, several more restrictive fire safety standards have been adopted in the City Building Code that apply to all new development in the City. The new fire zone designation and related standards are expected to place additional constraints on new development.

especially higher building costs. However, these standards are mandated by the State, and were not self imposed by the City.

C. CONTRACTUAL CONSTRAINTS

Development in Rolling Hills is controlled through both City enforced zoning and privately enforced CC&Rs. City zoning does not in itself constrain housing development. Reducing zoning standards or increasing densities would not modify the development limitations dictated by the CC&Rs, which control density.

Virtually all of the land in Rolling Hills is subject to the CC&Rs established in 1936 by the Palos Verdes Corporation. Exceptions to CC&R controlled land include the civic center, fire station site and scattered public open space sites. These CC&Rs set forth two classifications of property and restrict the development and use of property within each classification to either only single family or single family and limited public use. Neither classification allows for the development of multi-family housing or for commercial, office or industrial activity. The CC&Rs establish minimum parcel and dwelling unit sizes, and require approval by the RHCA Architecture Committee of all new development.

D. INFRASTRUCTURE CONSTRAINTS

Another factor adding to the cost of new construction is the limited availability of infrastructure, specifically streets, sewer, storm water and water facilities.

1. Streets

Rolling Hills has no public roads or streets. Use of privately owned roadways requires approval of the RHCA. The City’s privately owned road network is typified by winding roads with a 15 to 25 foot paved cross-section lacking in curbs, gutters and sidewalks. Narrow road width, coupled with steep grades and private roadways, effectively precludes public transit within the City. The City’s circulation infrastructure is not conducive to higher density housing.

Because of the steep terrain and geotechnical issues of the Rolling Hills land form, this constraint is unlikely to be reduced during the current planning period.
2. **Wastewater Disposal**

With the exception of thirteen residences that have individually or through the creation of a small sewer district hooked in with adjacent jurisdiction's sewer systems, there is no sanitary sewer system in Rolling Hills. Residences are served by individual septic tanks and leach lines. Insofar as the City remains on a septic system, this will prevent the development of higher density housing, including the construction of second units.

Because of its concern that septic systems hinder development and create potential water quality issues, the City has retained an engineering firm to assess the feasibility of a city-wide sewer system. The engineering firm determined that a conventional gravity sewer system is not feasible in the City and had studied a hybrid approach consisting of low pressure sewer system and gravity sewer system. The study determined that due to the terrain and unstable geological conditions of the City the cost of such a system would be prohibitive for such a small city with limited financial resources. The study was presented to the residents, and due to the high cost of construction of such a system, the residents were not interested in funding such a project through an Assessment District or any other method. Therefore, based on the feasibility study it is very unlikely that the development constraints associated with wastewater disposal will be removed during the current planning period.

3. **Storm Water Run-off**

To comply with the National Pollutant Discharge Elimination System (NPDES) for *Municipal Storm Water and Urban Runoff Discharges Within the County of Los Angles*¹⁴, the City has retained an engineering firm to assist the City control run-off from domestic and construction activities, to implement best Management practices (BMPs), and to reduce waste. These activities are intended to reduce development constraints associated with storm water quality.

4. **Fire Flow Requirements**

As noted above, water infrastructure is owned and maintained by the CA. Water Co. Additional development beyond that anticipated by the City General Plan would reduce water pressure and compromise fire fighting capabilities. Because of Rolling Hills’ steep and varied terrain and aging infrastructure, this constraint is unlikely to be reduced during the current planning period.

E. **TOPOGRAPHIC CONSTRAINTS**

Slopes of 25 to 50 percent are present on virtually every remaining undeveloped parcel in the City. Development on such severely sloped parcels requires substantial modification to the natural terrain that significantly adds to the cost of development.

---

¹⁴ Order No. 01-182 of the Los Angeles Regional Water Quality Control Board as amended by Order R4-2006-0074.

January 2, 2014
The extreme topography present in Rolling Hills serves as a significant constraint to the
development of affordable housing

F. GEOLOGIC CONSTRAINTS

Expansive soils and geologic hazard conditions continue to place constraints on
development within the City. As depicted in Figure 2, Seismic Hazards, the majority of
land in the City is located in earthquake-induced landslide areas. These are areas where
previous landslide movement has resulted in permanent ground displacement. The
California Division of Mines and Geology designates these areas as seismic hazards
requiring mitigation.

As summarized in the City of Rolling Hills Hazard Mitigation Plan, Rolling Hills is located
very near to the Palos Verdes Fault. In the case of a seismic event on that fault, Rolling
Hills is expected to experience very strong shaking that could be devastating to the City
and the nearby region that provides essential and critical services to the community.
The Newport-Inglewood Fault is located a few miles east of the City of Rolling Hills.
Although not as violent as the Palos Verdes Fault scenario, the shaking in the Newport-
Inglewood Magnitude seismic event would be strong. Due to the proximity of this fault
to the urbanized area of Los Angeles and Long Beach, the City’s essential and critical
service providers could experience long term impacts.

Liquefaction is a secondary effect of earthquake hazards. Liquefaction occurs when
ground shaking causes wet granular soils to change from a solid state to a liquid state.
This results in the loss of soil strength and the soil’s ability to support weight. Buildings
and their occupants are at risk when the ground can no longer support these buildings
and structures.

The California Geological Survey has identified areas most vulnerable to liquefaction. In
the City of Rolling Hills, there are numerous identified liquefaction zones and areas
subject to earthquake-induced landslides, as shown on Figures 3 and 4.

Building at the head of a landslide can decrease the bedrock strength along an existing
or potential rupture surface and “drive” the landslide down slope. Improper grading
practices can also trigger existing landslides. Because of these geologic hazards, the City
insists on minimal grading to minimize land disturbance and exacerbation of soils
instability. The danger of increased soil instability, particularly if higher density
development is constructed, would contribute to potential risk to human life as well as
to physical structures. The Safety Element of the General Plan sets forth policies to
restrict new development and expansion of existing development in areas susceptible to
landslides.

The City has developed a Site Plan Review Process by which most development must be
reviewed and approved by the City to prevent erosion and landslides and preserve
Rolling Hills’ natural hillside topography. The City’s grading requirements prohibit
extensive grading and recontouring of existing terrain. The City has adopted the County
of Los Angeles grading standards with some modifications necessary to ensure slope
stability. The City requires that all soil from grading be balanced on-site, which is necessary because export of materials is not practical due to the narrow roadways and fragile road surfaces. The RHCA also restricts the use of the streets for soil export due to potential impacts on street condition and public safety. However, export of soil from excavation activities, such as pools or basements is allowed.

Because of the public safety concerns associated with these geologic conditions, this constraint is unlikely to be reduced during the current planning period.
Figure 2. Seismic Hazards
Figure 3. Liquefaction and EQ-Induced Landslide Zones in the City of Rolling Hills – Torrance Quadrangle (Key: Green indicates area prone to liquefaction following earthquakes; Blue indicates area prone to landslides following earthquakes)
Figure 4. Liquefaction and EQ-Induced Landslide Zones in the City of Rolling Hills – San Pedro Quadrangle (Key: Green indicates area prone to liquefaction following earthquakes; Blue indicates area prone to landslides following earthquakes)
G. ENVIRONMENTAL CONSTRAINTS

Rolling Hills supports a wide variety of plant and wildlife. Many of these species are either listed or considered for listing by the U.S. Department of Fish and Wildlife and/or the California Department of Fish and Game. These species include the Palos Verdes Blue butterfly, the California Gnatcatcher, the Pacific Pocket Mouse, the San Diego Horned Lizard, and Brackishwater snail. The community is also underlain with blue-line streams that are under the jurisdiction of the Army Corps of Engineers.

Development that intrudes on these environmental constraints must provide mitigation satisfactory to the overseeing federal and state agencies. Typical mitigation is the preservation of habitat area, further restricting the potential land available for development.

Because of the federal and state regulations restricting development in Rolling Hills, this constraint is unlikely to be reduced during the current planning period.

H. CONSTRAINTS TO HOUSING FOR PERSONS WITH DISABILITIES

Constraints to the development, maintenance and improvement of housing for persons with disabilities impact housing production and availability. Recent changes to state law, including Government Code Sections 65583(a)(4) and 65583(c)(3), address the provision of accessible housing for disabled persons. These changes require that the Housing Element include an analysis of potential and actual governmental constraints upon the maintenance, improvement, or development of housing for all income levels and for persons with disabilities, including land use controls, building codes and their enforcement, site improvements, fees and other exactions required of developers, and local processing and permit procedures. These changes also require that the Housing Element address methods for removing governmental constraints to the maintenance, improvement, and development of housing, including housing for all income levels and housing for persons with disabilities.

As evidenced by its adoption of Resolution 699, Rolling Hills accommodates disabled access and complies with the recent changes to state law. Resolution 699 certifies the City’s recognition of the American with Disabilities Act and adopts necessary mitigation efforts to assist its disabled residents. The City has adopted the Los Angeles County Building Code. As long as construction is consistent with the Building Code, residents are permitted to provide any disabled access or amenity improvements necessary to reduce barriers. Access to homes via ramps is permitted. These disabled accommodations are processed administratively in conjunction with the building permit process and are permitted in both of the City’s residential zones.

**Residential Care Facilities:** According to the Rolling Hills Municipal Code, “family” means:
“Family” means one or more persons living as a single housekeeping unit, as distinguished from a group occupying a boarding, rooming or lodging house, hotel or club. Family may include domestic servants.

The City permits small residential care facilities that serve 6 or fewer clients in every residential zone. Regarding business licenses, the City follows California Health and Safety Code Section 1566.2, for residential facilities with six or fewer persons. The code says that they shall not be subject to any business taxes, local registration fees, use permits, fees, or other fees.

IV. HOUSING ASSESSMENT SUMMARY

Housing Element law requires cities to meet both local and regional housing needs. Rolling Hills’ local housing needs are discussed in Sections II and III above. Rolling Hills’ regional housing needs are established by the Southern California Association of Governments (SCAG), and are summarized below.

The Housing Plan, presented in Section VI that follows, establishes specific policies and programs to address these identified housing needs.

A. LOCAL HOUSING ASSESSMENT

Local housing needs, as discussed in Section II, have been identified based on input from available federal Census and state data, City Planning and Building Department records, and community input.

Based on this information, Rolling Hills is an affluent community with no affordable housing needs. However, data regarding special housing needs indicate that the City has a large elderly population. Although available data suggests that the City’s elderly population has no housing affordability needs, members of Rolling Hills’ elderly population may require senior assisted living arrangements. Section II.B.4 of this Element presents programs for addressing these senior housing needs.

B. REGIONAL HOUSING ASSESSMENT

State law requires jurisdictions to provide for their share of regional housing needs. As part of the Regional Housing Needs Assessment (RHNA), the Southern California Association of Governments (SCAG) determines the housing growth needs by income category for cities within its jurisdiction, which includes the City of Rolling Hills. RHNA determinations for the City of Rolling Hills during this planning period are presented in Table 14.

As illustrated in Table 14, Rolling Hills is required to provide adequate sites for the construction of 6 new dwelling units during this planning period. Of these new units, 1 should be affordable to Extremely Low Income households, 1 to Very Low Income
households, 1 to Low Income households, 1 to Moderate income households, and 2 to above moderate income households.

V. HOUSING OPPORTUNITIES

This section of the Housing Element evaluates the potential additional residential development that could occur in Rolling Hills pursuant to the General Plan and Zoning Ordinance. This section also discusses opportunities for energy conservation in residential development. Potential financial resources available to support the provision of affordable housing are also summarized.

A. AVAILABILITY OF SITES FOR HOUSING

Consistent with Government Code Sections 65583(a)(3) and 66683.2(h), to assess future residential development potential in Rolling Hills, an inventory of vacant parcels has been prepared and evaluated in terms of the actual capability of parcels to accommodate residential development. In addition, large parcels which are currently developed but which have the potential for further subdivision have also been evaluated. With the majority of the City’s developable acreage already built out, many of the remaining vacant parcels are characterized by physical constraints, which preclude their development. These constraints are primarily related to severe topography and/or existing landslides.

Figure 5 illustrates the vacant parcels in the City. However, about half of these parcels have been identified as inappropriate for residential or any other development because
of geologic constraints. Twelve of the vacant parcels in the southern portion of the City are located in the Flying Triangle area, where new development is prohibited by Los Angeles County Building Code. Three of the vacant parcels, located in the western portion of the City, have extreme geological constraints and are developable with single family residence only. The buildable pad on these lots is very small and could not accommodate larger developments. All of these parcels are subject to CC&Rs. Aggregating the development potential on available vacant lots, there are 38 vacant sites in the City of an average size of one to two acres, with 16 of the sites having geological or environmental constraints that make development during this planning period unlikely. Consequently, there are currently 16 vacant parcels available for development. Some of those also have extreme slopes and only portion of the lots could potentially be developed. Table 15 quantifies the number of dwelling units which could be accommodated on these parcels.

Non-residential properties in Rolling Hills are limited to City Hall and a school district site that contains a school bus maintenance facility, continuation high school and Palos Verdes Transit parking facility. Both sites are fully developed as institutional uses. Neither of these properties are anticipated to be redeveloped within the time frame of this element. Other governmental owned properties are developed with recreational uses, and some are located on steeply sloping properties, most without adequate road access.

Figure 5. Vacant Land Inventory Map
B. ABILITY TO MEET RHNA ALLOCATION

1. Housing Supply

As indicated in Table 14 above, the RHNA prepared by SCAG identifies a future housing need for Rolling Hills of 6 units to be developed over the 2014-2021 planning period. The residential land inventory for Rolling Hills (Table 15 above) identifies the potential for a maximum development of 16 additional single-family dwelling units, indicating the City is able to accommodate its designated share of above moderate income housing. However, with its limited land and serious geological, infrastructure and environmental constraints, Rolling Hills is unable to identify suitable sites to accommodate its regional allocation of Extremely Low, Very Low, Low or Moderate Income housing.

Section III of this Element describes the numerous constraints that make the rezoning of property in Rolling Hills to multifamily infeasible. Physical limitations of the City include:

- Steeply sloping hillsides;
- Landslide hazards;
- Lack of urban infrastructure, specifically sewer;
- Danger of wildland fires; and
- Sensitive animal habitats and species.

Contractual limitations further prohibit rezoning opportunities in the City. The RHCA has enforceable CC&Rs that run with the property in perpetuity. These CC&Rs have been in place prior to the City’s incorporation, and continue to restrict development to low density single family based on the community’s unique constraints.

2. Housing Affordability

HCD, pursuant to AB 2348 and recent amendments to Housing Element Law, established a new default methodology to determine the affordability of a housing site or housing development. Although development in Rolling Hills is severely limited by geologic, topographic and environmental constraints, HCD placed Rolling Hills in the same category of cities as much larger urban cities and categorized it as a metropolitan city. The amendments require that in metropolitan cities a site be zoned to permit at least 20 dwelling units per acre in order to qualify as a housing site potentially affordable to households in the Extremely Low, Very Low or Low Income ranges. Alternately, a city can present market information or provide subsidies to demonstrate the affordability of a housing site or new development.

Growth in the City of Rolling Hills is limited, and high-density development is severely constrained by its physical and environmental constraints, as well the RHCA CC&Rs. The adopted City zoning densities of one or two acre lots is based on infrastructure, geologic and environmental constraints. In many instances, only a small portion of the one and two acre lots is buildable, with the majority of the land constrained by steep slopes and canyons.
None of the reasonably available properties in the City of Rolling Hills could realistically develop at a density greater than 1 unit per acre. Consequently, having completed an inventory of land that could be suitable for residential development, including vacant sites and sites having the potential for redevelopment, and an analysis of the relationship of zoning and public facilities and services to those sites (Section 85683(a)(3)), the City of Rolling Hills finds no potential sites that could achieve the HCD default affordability density of 20 dwelling units per acre.

3. Availability of Public Services and Facilities

As discussed in Section III.D above, infrastructure in the City is limited. New construction of many of the 16 sites available may not be feasible due to the inability to construct streets, sewer and water systems to accommodate additional development. Expansion of these infrastructure systems also is not feasible because topographic and geologic constraints make such improvements cost prohibitive. In addition, expansion of infrastructure systems may cause the following adverse impacts on public health, safety and welfare:

- **Geologic Setting** - Numerous active landslides in Rolling Hills greatly diminish development potential and call for caution in expanding infrastructure and increasing densities.

- **Rural Design and Community Roadway Character** - The current capacity, design, and topographic constraints of the City roadways indicate increased residential densities would compromise road safety and traffic.

- **Fire Flow Requirements** – The California Water Company owns and maintains water lines in the City and the Utility has no plans to upgrade the aging water system. Therefore, fire-fighting capabilities could be compromised due to aging system, which could result in reduction in water pressure.

- **Lack of Sewer** – Most areas of the City are unserved by sewer. Unstable soils make the extension of the sewer system extremely challenging.

- **Very High Fire Hazard Severity Zone** – The entire City has been designated by the State Fire Marshal as being located in the VHFHSZ. As a result, several more restrictive fire safety standards have been adopted in the City Building Code that apply to all new development in the City, making housing construction more expensive.

C. OPPORTUNITIES FOR ENERGY CONSERVATION

Under current law, this Rolling Hills Housing Element must include the following:

Analysis of opportunities for energy conservation with respect to residential development. Government Code Section 65583(a)(7).
The California state legislature in 1974 created the California Energy Commission to deal with the issue of energy conservation. Since that time, the Energy Commission has set conservation standards for new residential and nonresidential construction. These standards, known as Title 24, were most recently updated by the Energy Commission and will be effective January 2014. The new standards, implemented by the City as part of the recently adopted California Green Building Code, specify energy saving design for walls, ceilings and floor installations, as well as heating and cooling equipment and systems, gas cooling devices, conservation standards, and the use of nondepleting energy sources, such as solar energy or wind power.

Through the Site Plan Review process and the building code for new development or additions, the City requires energy conservation in buildings and water conservation in the landscaping areas. The City has adopted a Water Efficient Landscape Ordinance that requires landscaping be water wise and plants be drought tolerant.

In addition, the Rolling Hills Open Space and Conservation Element establishes a policy to permit the use of solar panels to maximize energy efficiency. In the past few years, the City of Rolling Hills has approved 42 solar panel requests from residents. Other residential energy design standards can be applied to reduce energy costs, including:

- **Glazing** - Glazing on south facing exterior walls allows for winter sunrays to warm the structure. Avoidance of this technique on the west side of the unit prevents afternoon sunrays from overheating the unit.

- **Landscaping** - Strategically placed vegetation reduces the amount of direct sunlight on the windows. Incorporation of deciduous trees in the landscaping plans along the southern area of units reduces summer sunrays, while allowing penetration of winter rays to warm the units.

- **Building Design** - The implementation of roof overhangs above southerly facing windows shield the structure from solar rays during the summer months.

- **Cooling/Heating Systems** - The use of attic ventilation systems reduces attic temperatures during summer months. Solar heating systems for swimming pool facilities save on energy costs. Natural gas is conserved with the use of flow restrictors on all hot water faucets and showerheads.

- **Weatherization Techniques** - Weatherization techniques such as insulation, caulking, and weatherstripping can reduce energy use for air-conditioning up to 55 percent and for heating as much as 40 percent. Weatherization measures seal a dwelling unit to guard against heat gain in the summer and prevent heat loss in the winter.

- **Efficient Use of Appliances** - Each household contains a different mixture of appliances. Regardless of the mix of appliances present, appliances can be
used in ways that increase their energy efficiency. Unnecessary appliances can be eliminated, proper maintenance and use of the stove, oven, clothes dryer, clothes washer, dishwasher, and refrigerator can also reduce energy consumption. New appliance purchases of air-conditioning units and refrigerators can be made on the basis of efficiency ratings. The State prepares a list of air-conditioning and refrigerator models that detail the energy efficiency ratings of the product on the market.

- Outdoor Lighting Ordinance – Requires most energy efficient lighting for all outdoor lighting.
- Efficient Use of Lighting - Costs of lighting a home can be reduced through purchase of light bulbs, which produce the most lumens per watt, avoidance of multi-bulb mixtures and use of long life bulbs and clock timers on security buildings.

In 2008, the City had adopted Resolution No. 1040, providing for a City of Rolling Hills Natural Environment and Sustainability Committee. The committee was composed of nine resident members, appointed by the City Council with the purpose to assess and track the City’s flora and fauna; to develop and recommend environmentally sustainable policies, practices and programs for Rolling Hills and to provide outreach to residents and bring in educational programs to the City. However, because Rolling Hills’ residents are already environmentally conscientious, the Council disbanded the Committee, finding it was not needed.

As a member of SCAG, the City also participates in the Regional Comprehensive Plan to achieve a sustainable future. The City is a member of the South Bay Council of Governments Green Task Force and the City joined ICLEI, which is a membership association of local governments committed to advancing climate protection and sustainable development.

The City’s commitment to energy efficiency is carried forward in Section V.C., Housing Implementation Plan (2014-2021).

D. FINANCIAL RESOURCES

Development of affordable housing in Rolling Hills would require extraordinary financial assistance. Assuming the other constraints previously discussed could be eliminated, potential sources of such assistance and the applicability to Rolling Hills must be examined.

The availability of Federal and State funding sources is subject to many limitations. Many types of government assistance are conditioned upon the existence of populations in need of assistance or housing stock conditions requiring repair or rehabilitation. The absence of in need populations and deteriorated housing in Rolling Hills renders the City ineligible for many types of assistance. In addition, high housing values in the City preclude the use of the Section 8, Housing Voucher Assistance Payments Program.
Under that program, the Department of Housing and Urban Development (HUD) provides subsidies to landlords under certain conditions. Only housing units with rents at or below maximum rent levels set by HUD for each county are eligible to receive subsidies. Rents in the City far exceed maximum allowable levels payable under the Section 8 Program.

One source of housing assistance used by many local governments is money derived from redevelopment project tax increment. This source is unavailable, however, because the City has no redevelopment areas and the absence of blight in the City precludes the formation of a redevelopment area. The City’s limited financial resources further preclude the use of City General Fund monies for housing assistance.

The absence of federal, state and local funding sources for affordable housing in Rolling Hills, coupled with the high cost of land and construction, act as a significant constraint to the provision of affordable housing in the City. Private financing of affordable housing is also unlikely given the low densities required by the CC&Rs and by the topography of the City.

Since inception of the CDBG program in 1979, the City of Rolling Hills has used its CDBG funds to provide over $225,000 to local communities for housing rehab programs and for construction of Section 8 housing. Between 2008 and 2011, Rolling Hills received a total of $25,331 in CDBG funds, an average of $6,333 per year. The City transferred these funds to the City of Rancho Palos Verdes for their Senior Citizens Home repair program. However, the cost of administering the CDBG program has made it infeasible for the City of Rolling Hills to continue in the program.

Although many available funding sources would not be available to Rolling Hills at this time, Table 16 summarizes potentially available funding sources as a reference to City staff and potential developers:

</tr>
<tr>
<td>AB 655-Multi-Family Revenue Bonds</td>
<td>Allows for participation in a Countywide bond program for low-income multi-family housing. Legal and environmental constraints on multi-family housing in Rolling Hills would make it very difficult to build housing meeting the low-rent requirements of this program.</td>
</tr>
<tr>
<td>Single-Family Mortgage Revenue Bonds</td>
<td>Allows for the issuance of bonds for below market loans for low and moderate-income homebuyers. The high costs of homes in the City make them unaffordable to persons targeted in this program.</td>
</tr>
<tr>
<td>Redevelopment-Tax Increment Financing</td>
<td>Allows local agencies to keep increases in taxes for redevelopment areas. This is inapplicable to Rolling Hills because there are no blighted areas, which could qualify for redevelopment.</td>
</tr>
</tbody>
</table>
VI. HOUSING PLAN

Chapters II to V establish the housing needs, opportunities, and constraints in Rolling Hills. The Housing Plan evaluates the accomplishments of the last adopted housing element, and then presents the City’s eight-year Housing Plan. The Plan sets forth the goals, policies, and programs to address Rolling Hills' identified housing needs.

A. REVIEW OF HOUSING ELEMENT PERFORMANCE TO DATE

State Housing Element law requires communities to assess the achievements of adopted housing programs as part of the five-year update to their housing elements. These results should be quantified where possible, but may be qualitative where necessary. These results need to be compared with what was projected or planned in the previous element. Where significant shortfalls exist between what was planned and what was achieved, the reasons for such difference must be discussed.

I. Progress Toward Implementing the 2006-2014 (4th Cycle) Housing Element Programs

The 2006-2014 Rolling Hills Housing Element established programs to address the following primary housing goals:

- Provide for housing which meets the needs of existing and future Rolling Hills' residents.
- Maintain and enhance the quality of residential neighborhoods in Rolling Hills.
- Provide housing services to address the needs of the City's senior citizen population.
- Promote housing opportunities for all persons regardless of race, religion, sex, marital status, ancestry, national origin or color.

The following section examines the progress made towards implementing the City's housing programs as set forth in the 2006-2014 Housing Element. As summarized in Table 17, the City has actively pursued avenues for supporting residential development and facilitating affordable housing opportunities, despite the overwhelming constraints that limit development opportunities in Rolling Hills.

<table>

</tr>
</tbody>
</table>

Goal 2: Maintain and enhance the quality of residential neighborhoods in Rolling Hills.

| Code Enforcement: In the event that a violation of City codes or regulations is discovered, the City works with the County and the Association to remediate the violation. | The City continues to promote code enforcement in cases of violations. An educational program including information brochures has been implemented to discourage violations. A program to accomplish compliance also has been implemented. Approximately thirty violations have occurred in the City and only six of them consisted of residential structural deficiencies, which have been corrected during the past planning period. Code enforcement is intended to protect the public health, safety and welfare, and is not considered a constraint to the development of affordable housing. |
| Ground Instability: Continue to explore possible solutions to ground instability problems. | The City has continued to work with property owners and geotechnical consultants to establish construction regulations and to explore other potential solutions to the problem. However, despite these continued efforts, certain property in high-risk landslide areas remains unbuildable. |
| Neighborhood Sponsored Sewer Districts: Promote and facilitate the development of homeowner sponsored sewer districts. | The City has retained a consulting engineer to assess the feasibility of establishing a citywide sewer system. Because of the geologic and topographic constraints, the cost of installing sewer citywide makes installation of a sewer system infeasible. |
| Housing Repair on Landslide Sites: Continue to allow the repair of damaged structures and remedial grading in landslide areas. | The City continues to allow repair of damaged structures and remedial grading in landslide areas with special permits. |
| Home Improvement Program for eligible low and moderate-income residents. | In keeping with its commitment to support housing element objectives and low income housing needs, Rolling Hills assigned its CDBG funds to the City of Rancho Palos Verdes Home Improvement Programs for eligible low and moderate income residents to provide grants and zero percent deferred loans to correct hazardous structural conditions, eliminate blight, and improve disabled access. |

Goal 3: Provide housing services to address the needs of the City’s senior citizen population.

| Shared Housing Program: Actively market the two area shared housing programs – Focal Point at the South Bay Senior Services in Torrance and Anderson Senior Center in San Pedro - which assist seniors in locating roommates to share existing housing in the community. | Informational brochures advertising existing shared housing programs are available at the public counter. Records on the number of matches that have occurred during the planning period are not available. |
| Reverse Mortgage Program: Inform residents about the advantages of reverse mortgages. A reverse mortgage is a deferred payment loan or a series of such loans for which a home is pledged as security, and can offer a viable financing alternative to many of Rolling Hills’ elderly homeowners. | The City offers referral services to seniors interested in pursuing a reverse mortgage. |
| Elderly Services: Rolling Hills will continue to provide information to its elderly residents concerning available senior services. | In keeping with its commitment to assist its elderly residents find needed services, the City maintains a list of local senior facilities at City Hall. |

Goal 4: Promote housing opportunities for all persons regardless of race religion, sex, marital status, ancestry, national origin or color.

B. GOALS AND POLICIES

As part of this General Plan update, the goals and policies of the past Housing Element were reviewed as to their appropriateness in addressing the community’s housing needs. The following goals and policies reflect the City’s continued commitment to actively support residential development and avenues for facilitating affordable housing opportunities, despite the overwhelming constraints that limit development opportunities in Rolling Hills. These policies will serve as a guide to City officials in daily decision making.

**GOAL 1: Provide for housing which meets the needs of existing and future Rolling Hills’ residents.**

**Policy 1.1:** Evaluate ways in which the City can assist in providing housing to meet special community needs.

**Policy 1.2:** Work with governmental entities to explore the possibility of providing affordable housing for low and moderate income and senior citizen households in the South Bay region.

**Policy 1.3:** Encourage the development of residential units that are accessible to the disabled or are adaptable for conversion to residential use by disabled persons.

**Policy 1.4:** Encourage the use of energy conservation devices and passive design concepts that make use of the natural climate to increase energy efficiency and reduce energy costs.

**Policy 1.5:** Continue to facilitate the development of housing in the City, taking into account existing financial, legal, and environmental constraints.

**GOAL 2: Maintain and enhance the quality of residential neighborhoods in Rolling Hills.**

**Policy 2.1:** Encourage and assist in the maintenance and improvement of existing neighborhoods to maintain optimum standards of housing quality and design.
**Policy 2.2:** Require the design of housing to comply with the City's building code requirements.

**Policy 2.3:** Require compatible design to minimize the impact of residential redevelopment on existing residences.

**Policy 2.4:** Enforce City housing codes to assure the upkeep and maintenance of housing in the City.

**GOAL 3: Provide housing services to address the needs of the City's senior citizen population.**

**Policy 3.1:** Provide reference and referral services for seniors, such as in-home care and counseling for housing-related issues, to allow seniors to remain independent in the community.

**Policy 3.2:** Maintain information regarding shared housing programs in nearby cities as an option for seniors to share existing housing in the community.

**Policy 3.3:** Coordinate with lending companies and institutions to educate the City's elderly homeowners as to the availability of reverse mortgage loans, which allow income-poor seniors to remain in their homes.

**GOAL 4: Promote housing opportunities for all persons regardless of race, religion, sex, marital status, ancestry, national origin or color.**

**Policy 4.1:** Affirm a positive action posture, which will assure that unrestricted housing opportunities are available to the community, and enforce all applicable laws and policies pertaining to equal housing opportunity.

**Policy 4.2:** Make information on fair housing laws available to residents and realtors in the City by distributing at the City Hall public counter and on request.

**Policy 4.3:** Investigate any allegations of violations of fair housing laws.

**C. HOUSING IMPLEMENTATION PLAN (2014-2021)**

The goals and policies set forth in the Housing Element to address the City's housing needs are implemented through a series of housing programs. The Housing Element program strategy consists of both programs currently in use in the City and additional programs to provide the opportunity to adequately address the City's housing needs. The following section provides a brief description of each program, planning period quantified objectives, funding source, responsible agency and implementation time frame. Each of these programs have been developed consistent with HCD guidelines for developing effective programs and are responsive to the unique constraints facing
These programs are currently on-going and will continue through the current planning period.

**Shared Housing:**

Many seniors who prefer to live independently resort to institutionalized living arrangements because of security problems, loneliness, or an inability to live entirely independently. Seniors in Rolling Hills have access to two nearby shared housing programs: Focal Point at the South Bay Senior Services Center in Torrance and the Anderson Senior Center in San Pedro. Both these centers offer resources to assist seniors locate roommates interested in sharing housing. These programs make roommate matches between seniors based on telephone requests. Records on the number of matches that have occurred during the planning period are not available. The City will continue to actively market the availability of these shared housing programs by providing informational brochures at the public counter.

- Quantified Objective: Continue to provide informational brochures advertising existing shared housing programs to increase the number of roommate matches over the 2014-2021 period.
- Funding Source: City General Fund
- Responsible Agency: City Planning Department.

**Reverse Mortgage Program:**

The most substantial asset of most elderly homeowners is their home, which in Rolling Hills has increased significantly in value in the past years. But while owning a home in Rolling Hills may provide a rich asset base, the onslaught of retirement and a fixed income can cause many elderly homeowners to quickly become income poor. Home maintenance repairs multiply as the home ages, and with rising costs in home utilities, insurance, and taxes, housing maintenance often gets deferred.

An alternative option for elderly homeowners is to draw needed income from the accumulated equity in their homes through a reverse mortgage. A reverse mortgage is a deferred payment loan or a series of such loans for which a home is pledged as security. Qualification for the loan is based primarily on property value rather than income, allowing the elderly homeowner on a fixed income to receive a loan for which he or she would not otherwise qualify. Most reverse mortgage programs permit homeowners to borrow up to 80 percent of the assessed value of their property, to receive needed principal of up to 25 percent of the loan, and then to receive monthly annuity payments for the life of the loan.

---

Reverse mortgages may offer a viable financing alternative to many of Rolling Hills’ elderly homeowners. The City provides information to its senior population interested in pursuing a reverse mortgage.

- **Quantified Objective:** Continue to offer referral services to seniors interested in pursuing a reverse mortgage.
- **Funding Source:** None necessary.
- **Responsible Agency:** City Planning Department.
- **Implementation Time Frame:** Currently On-going (2014-2021).

**Sewer Feasibility:**

Because of its concern that septic systems hinder development and create potential water quality issues, the City has retained an engineering firm to assess the feasibility of a city-wide low pressure sewer system. The study determined that due to the terrain and unstable geological conditions of the City the cost of such a system would be prohibitive for such a small city with limited financial resources. Therefore, based on the feasibility study it is very unlikely that the development constraints associated with wastewater disposal will be removed during the current planning period.

- **Quantified Objective:** Continue to consider sewer systems as new technology becomes available.
- **Funding Source:** City General Fund/ Private Assessment District
- **Responsible Agency:** City Manager’s Office.
- **Implementation Time Frame:** Currently on-going (2014-2021).

**Storm Water Runoff:**

To comply with the National Pollutant Discharge Elimination System (NPDES) for Municipal Storm Water and Urban Runoff Discharges Within the County of Los Angeles, the City has retained an engineering firm to assist the City control run-off from domestic and construction activities, and to reduce waste. These activities are intended to reduce development constraints associated with storm water quality.

- **Quantified Objective:** Continue to implement Best Management Practices (BMPs) pursuant to NPDES requirements.
- **Funding Source:** City General Fund.

---

16 Order No. 01-182 of the Los Angeles Regional Water Quality Control Board as amended by Order R4-2006-0074.
• Responsible Agency: City Planning Department.

**Code and CC&R Enforcement:**

One factor contributing to the high levels of maintenance of Rolling Hills’ homes and neighborhoods is the high pride of ownership by its residents. City staff and Los Angeles County Building Officials continuously assure that relevant City Codes and regulations are being adhered to. The Architectural Committee of the Association, under a separate process, also assures consistency with their CC&Rs. In the event that a violation of City codes or regulations is discovered, City staff works to cure the violation.

• Quantified Objective: Continue code enforcement efforts.

• Funding Source: General Fund.

• Responsible Agency: City Planning Department.

**Reasonable Accommodation:**

Pursuant to Government Code Section 65583(c)(3), the City is committed to providing reasonable accommodations for housing.

• Quantified Objective: Permission of residents to construct modifications as required to reduce barriers consistent with the Building Code.

• Funding Source: General Fund.

• Responsible Agency: City Planning Department.

**Energy Conservation:**

The City commits to following sustainable development and energy conservation recommendations of its past Natural Environment and Sustainability Committee and SCAG. The City has adopted the Green Building Code.

• Quantified Objective: Follow sustainable development and energy conservation recommendations of SCAG and the Green Building Code.

• Funding Source: General Fund.
Facilitate New Construction:

The City will continue to work with and assist housing developers and builders to enable new housing to be built in the City. The steep hillsides, deep canyons, geologic hazards and CC&Rs create constraints in the City that require high levels of cooperation between City staff, developers and builders. Continued cooperation will facilitate the construction of new housing and to allow the City to attain a feasible portion of its regional share allotment of new housing.

- Quantified Objective: The development of Rolling Hills’ buildout potential of up to 16 housing units during this planning period. These potential units satisfy Rolling Hills’ 2014-2021 regional share of Above Moderate Income housing.

- Funding Source: General Fund.

- Responsible Agency: City Planning Department.

Facilitate Repair and Remodeling Activities:

Landslide damaged homes may continue to conduct remedial repair work on damaged homes and hillsides in the City. In addition, many homeowners have instigated extensive home remodeling which has lead to significant increases in the value and quality of existing housing stock. Both repair and remodeling activities are expected to continue. City staff has been active in facilitating the permitting process for remodeling and remedial repair work and will continue to provide this assistance.

- Quantified Objective: Continue to assist all applicants for remodeling and remedial repair permits.

- Funding Source: General Fund.

- Responsible Agency: City Planning Department.

Ground Instability:

Continue to explore possible solutions to ground instability problems. Any grading, new structures and additions require a soils and geology report that proves stability along with City and County permits. Also, any grading, new structure and additions of more
than one thousand square feet or where the size of the structure increases by more than 25% in any 36-month period requires a Site Plan Review and approval by the Planning Commission and concurrence by the City Council. The City has developed strict grading practices that limit lot grading to no more than 40 percent of the lot, and require maintenance of natural slopes. These practices are necessary to safeguard the public health and safety against ground instability problems.

- **Quantified Objective:** Continue to require geologic studies for each new development to ensure that land is suitable for construction and that construction will not negatively impact adjacent properties.

- **Funding Source:** City General Fund.

- **Responsible Agency:** City Planning Department and City Manager’s Office.

- **Implementation Time Frame:** Currently On-going (2014-2021).

**Housing Repair on Landslide Sites:**

The City will continue to allow the remedial repair of damaged structures and remedial grading in landslide areas with special permits.

- **Quantified Objective:** Continue to assist all persons qualified.

- **Funding Source:** General Fund.

- **Responsible Agency:** City Planning Department.

- **Implementation Time Frame:** Currently On-going (2014-2021).

**Fair Housing Program:**

As a means of increasing public awareness of legal rights under fair housing laws, the City provides at its public counter brochures for the Fair Housing Foundation that advertise services offered by the Foundation, including housing discrimination response, landlord-tenant relations, housing information and counseling, and community education programs.

- **Quantified Objective:** Continue to provide informational brochures at the City Hall public counter and on request; and provide information regarding the Fair Housing Foundation and services they provide in the citywide newsletter. This information is available for distribution at community events.

- **Funding Source:** General Fund.

- **Responsible Agency:** City Planning Department.

**Summary of 2014-2021 Quantified Objectives:**

- Number of Units to be Constructed: 16 single-family units
- Number of Units to be Rehabilitated: 0 rehabilitation need
- Number of Units to be Conserved/Preserved: 693 single-family housing units.

Table 18 disaggregates these objectives by income group. Because of the high median value of homes in Rolling Hills, each of the potential 16 additional houses are expected to be available to only households in the above moderate income range. The City’s conservation/preservation objective includes all of the existing 693 housing units. These units are disaggregated by income group according to the percent of household income as reported in the 2010 Census (reference Table 7).
